IN THE CLAIMS:

1 - 12. (Canceled)

13. (Currently amended) A user information processing system having a terminal unit employed by a user and a server to which said terminal unit can have access, said system comprising:

said terminal unit for accumulating terminal use record information upon use of said terminal unit by said user and the profile information of said user generated on the basis of said terminal use record information; and

said server for producing said profile information on the basis of said accumulated terminal use record information; and

storing means detachably provided in said terminal unit for storing at least one of said use record information and said profile information.

14. (Currently amended) A terminal unit comprising:

use record information writing means for writing use record information used by the user;

transmitting means for transmitting said use record information accumulated in storing means to profile information generating means remote from the terminal unit for every prescribed timing, wherein said storing means is detachably provided in said terminal unit;

profile information writing means for receiving the profile information of said user based on said use record information which is transmitted from said profile information generating means and writing said received profile information in said storing means; and

selecting means for selecting provided information corresponding to said profile information written in said storing means from among provided information transmitted from prescribed information providing means.

15. (Canceled)

16. (Canceled)

17. (Previously presented) The terminal unit according to claim 14,
wherein

61
said transmitting means transmits said profile information stored in said
storing means as well as said use record information accumulated in said storing means
to said profile information generating means;

said profile information writing means receives the new profile information
of said user based on said use record information which is transmitted from said profile
information generating means and said stored profile information, and writes said
received new profile information in said storing means; and said selecting means
selects said provided information on the basis of said new profile information written in
said storing means.

18. (Currently amended) A terminal unit comprising:

use record information writing means for writing use record information
used by a user in prescribed storing means detachably provided in said terminal unit;

~~profile information generating means for generating the profile information
of said user on the basis of said use record information accumulated in said storing
means;~~

profile information writing means for writing ~~said generated~~ profile
information of said user in said storing means, wherein said profile information is
generated by a profile information generating means remote from the terminal unit on
the basis of said use record information accumulated in said storing means; and

selecting means for selecting provided information corresponding to said
profile information written in said storing means from among provided information
transmitted from prescribed information providing means.

19. (Canceled)

20. (Previously presented) The terminal unit according to claim 18, wherein

said profile information generating means generates the new profile information of said user on the basis of said profile information stored in said storing means as well as said use record information accumulated in said storing means;

said profile information writing means writes said generated new profile information in said storing means; and

said selecting means selects said provided information on the basis of said new profile information written in said storing means.

21. (Currently amended) An apparatus for providing information to a terminal unit remote from the apparatus, said apparatus comprising:

profile information generating means for generating the profile information of a prescribed user on the basis of the use record information of said terminal unit of said user transmitted from said terminal unit; ~~and~~

transmitting means for transmitting said generated profile information to said terminal unit; and

storing means detachably provided in said terminal unit for accumulating said use record information and said profile information.

22. (Previously presented) The apparatus for providing information according to claim 21, wherein

said profile information generating means generates the new profile information of said user on the basis of said use record information and the past profile information of said user transmitted from said terminal unit; and

said transmitting means transmits said new profile information thus generated to said terminal unit.

23. (Currently amended) An apparatus for providing information to a terminal unit remote from the apparatus, said apparatus comprising:

profile information generating means for generating the profile information of a prescribed user on the basis of the use record information of said terminal unit of said user transmitted from said terminal unit; and

storing means for storing said profile information thus generated, wherein said storing means is a storage medium detachably provided in said terminal unit.

24. (Previously presented) The apparatus for providing information according to claim 23 comprising:

said profile information generating means generates new profile information of said user on the basis of said use record information and the past profile information of said user stored in said storing means; and

said storing means stores said new profile information thus generated.

25. (Previously presented) The apparatus for providing information according to claim 23 further comprising:

selecting means for selecting information supplied to said user on the basis of the profile information stored in said storing means.

26. (New) The user information processing system according to claim 13, wherein said server generates new profile information on the basis of said profile information of said user and said accumulated terminal use record information.

27. (New) A user information processing system comprising:

a terminal unit adapted to accumulate terminal use record information upon use of the terminal unit by a user; and

a server adapted to generate profile information of the user on the basis of the terminal use record information accumulated by the terminal unit, wherein said terminal unit is adapted to accumulate the profile information generated by said server.
